

WHAT IS 'OPEN ACCESS' ENDOSCOPY?

Our aim is to provide assistance to your patients in understanding 'Open Access' Endoscopy, and who would be suitable for this procedure.

Open Access is a service provided by Glen Iris Private that aims to reduce wait times for quick access to a procedure with our reputable gastroenterologists and colorectal surgeons that participate in 'Open Access' Endoscopy.

Your practice may refer a patient for direct access for a colonoscopy or gastroscopy, meaning the patient does not require a consultation with a specialist first.

Open Access Suitability

Open Access Endoscopy is most suitable for patients with a definite indication, such as:

- A positive FOBT
- Polyp surveillance
- Rectal bleeding
- Unexplained change in bowel habits
- Family history CRC
- Reflux symptoms
- Dyspepsia
- Upper abdominal pain
- Dysphagia / Odynophagia
- Follow up screening for Barrett's or Coeliac disease

Open Access Exclusions

Not all patients are suitable for open access. For patients with significant comorbidities or elderly patients with multiple comorbidities, a consultation with a specialist prior to colonoscopy may be considered by the GP at the practice. It is often helpful for elderly patients to understand the risks and benefits of having this investigation performed. As such, all patients aged 80 years and over will automatically be scheduled for a consultation prior to booking.

Please note: Open Access is available to patients aged 18 years and over only.

Participating Specialists:

- Dr David Fone
- A/Prof Mark Ward
- Dr Kristen Bechly
- Dr Chris Desmond
- Dr Arun Gupta
- A/Prof Greg Moore
- Dr Jonathan Tan
- Dr Howard Tang
- Dr Matt Kitson
- Mr Paul Burton
- A/Prof Antony Friedman
- Dr Simon Hew
- Dr Sim Ong
